

# Jared Zoneraich

Hacker, Nerd, Student, Entrepreneur

Landing Page: <http://imjaredz.com/>

Email: [me@imjaredz.com](mailto:me@imjaredz.com)

I am currently a junior in the Academy for Technologies and Computer Science at the Bergen County Academies high school in New Jersey. Most of my free time is spent programming, learning, shipping, or cold emailing.

## Experience:

### hackBCA

Founder

hackBCA is one of the first and largest hackathons specifically for high school students.

### Warby Parker

Python, Nagios, RabbitMQ, SQL

Internship during the summer after my sophomore year of high school. I was the "Technology Intern".

### Project Alexandria

Co-Founder

PA was created to help students study more efficiently through easy sharing and collaboration of study guides.

### Newlio

PHP, MongoDB, Yii, Javascript, Git

Internship during the summer after my freshman year of high school. I learned a lot about web development there.

## Projects:

### ScreenShades

HTML/CSS, JS, Node, MongoDB

At the 2013 PennApps Fall hackathon, I helped create a Chrome extension that seamlessly (without user input) stops your friends from spoiling TV shows for you (using machine learning). ScreenShades made it into the top 20 hacks (out of 204) and won awards and prizes from Comcast, Google, and MongoDB.

### ClassMatch

HTML/CSS, JS, Python, GAE, Bootstrap

To make the process of finding one's classmates for the upcoming year easier and more efficient than each student posting on Facebook, Paras Modi and I created ClassMatch. Within an hour of releasing it to our high school we surpassed the free GAE quota, and our first day brought 858 visits!

### Learn to Drive

HTML/CSS, JS, GM SDK, GAE, Bootstrap

My team's app won 2nd place at the 2013 TechCrunch

NYC Disrupt hackathon and GM's award for the best app using their API. Learn to Drive is an app, to be placed in the dashboard of automobiles, that aids in the process of learning how to drive.

### SoundSculptr

Python, LEAP Motion, OpenShift, JS, Flask, Bootstrap

My team and I placed in the top 20 apps at the 2013 Spring PennApps hackathon and won the award for the "Most Quotidian Hack". SoundSculptr is a new way to create music. Using only his hands (we used a developer copy of LEAP Motion for this project), a user is able to "sculpt" and then export music.

*SoundSculptr*

## Education:

<b>Bergen County Academies High School</b> The Academy for Technologies and Computer Science Class of 2015	
--	--

<b>Data Structures</b>	in progress
<b>AP Computer Science</b>	2013
<b>CS253: How to Build a Blog</b>	2012
<b>Python Programming</b>	2012
<b>Intro to Web Development</b>	2011
<b>Intro to iOS Development</b>	2011
<b>Intro to Robotics</b>	2010
<b>Intro to C++</b>	2010

## Skills:

### — Programming Languages —

Most Proficient	Have Used Before
Python	Bash
HTML/CSS	C
Java	Objective-C
Javascript	
PHP	

### — Technologies —

Most Proficient	Have Used Before	
Google App Engine	Vim	RabbitMQ
Git	LEAP Motion SDK	Nagios
Twitter Bootstrap	Heroku	iOS SDK
Jinja2	OpenShift	Yii
	MongoDB	MySQL
	Flask	PostgreSQL
	Django	SQLAlchemy
	GM Dashboard SDK	Node.js
