

Jared Zoneraich

Hacker, Nerd, Student, Entrepreneur

Landing Page: <http://imjaredz.com/>

Email: me@imjaredz.com

I am an incoming freshman at the University of California-Berkeley, majoring in Electrical Engineering and Computer Science. Most of my free time is spent programming, learning, shipping, or cold emailing.

Experience:

reddit

Intern for Alexis Ohanian (Founder)

Internship during my senior year of high school. Helped Alexis with projects involving code, negotiation, and research.

hackBCA

Founder

hackBCA is one of the first and largest hackathons specifically for high school students.

Warby Parker

Python, Nagios, RabbitMQ, SQL

Internship during the summer after my sophomore year of high school. I worked on server monitoring and MQs.

Newlio

PHP, MongoDB, Yii, Javascript, Git

Internship during the summer after my freshman year of high school. I worked on the front and back end of admin pages.

Projects:

ScreenShades

HTML/CSS, JS, Node, MongoDB

At the 2013 PennApps Fall hackathon, I helped create a Chrome extension that seamlessly (without user input) stops your friends from spoiling TV shows for you (using machine learning). ScreenShades made it into the top 20 hacks (out of 204) and won awards and prizes from Comcast, Google, and MongoDB.

ClassMatch

HTML/CSS, JS, Python, GAE, Bootstrap

To make the process of finding one's classmates for the upcoming year easier and more efficient than each student posting on Facebook, Paras Modi and I created ClassMatch. Within an hour of releasing it to our high school we surpassed the free GAE quota, and our first day brought 858 visits!

Learn to Drive

HTML/CSS, JS, GM SDK, GAE, Bootstrap

My team's app won 2nd place at the 2013 TechCrunch

NYC Disrupt hackathon and GM's award for the best app using their API. Learn to Drive is an app, to be placed in the dashboard of automobiles, that aids in the process of learning how to drive.

SoundSculptr

Python, LEAP Motion, OpenShift, JS, Flask, Bootstrap

My team and I placed in the top 20 apps at the 2013 Spring PennApps hackathon and won the award for the "Most Quotidian Hack". SoundSculptr is a new way to create music. Using only his hands (we used a developer copy of LEAP Motion for this project), a user is able to "sculpt" and then export music.

SoundSculptr

Education:

Bergen County Academies High School The Academy for Technologies and Computer Science Class of 2015	
--	--

Data Structures	2014
AP Computer Science	2013
CS253: How to Build a Blog	2012
Python Programming	2012
Intro to Web Development	2011
Intro to iOS Development	2011
Intro to Robotics	2010
Intro to C++	2010

Skills:

— Programming Languages —

Most Proficient	Have Used Before
Python	Bash
HTML/CSS	C
Javascript	Objective-C
Java	
PHP	

— Technologies —

Most Proficient	Have Used Before	
Flask	Jinja2	Nagios
Git	Vim	iOS SDK
jQuery	LEAP Motion SDK	Yii
Twitter Bootstrap	OpenShift	MySQL
MongoDB	Django	PostgreSQL
Heroku	GM Dashboard SDK	SQLAlchemy
Google App Engine	RabbitMQ	Node.js
