# Jared Zoneraich
Hacker, Nerd, Student, Entrepreneur

Landing Page: http://imjaredz.com/
Email: me@imjaredz.com

I'm a freshman at UC Berkeley, majoring in Electrical Engineering and Computer Science. I attend too many hackathons and started one of the first high school hackathons. Previously, I have interned with Implisit (acquired by Salesforce), reddit, Major League Hacking, Warby Parker, and Newlio. Currently a Campus Associate for Alsop Louie Partners.

Experience:

Implisit (aqd Salesforce)
ES6, React, Flux, Flask

Took a gap year before college and worked at Implisit in Tel Aviv. Worked on the front-end before Salesforce acquired Implisit.

hackBCA
Founder

hackBCA is one of the first and largest hackathons specifically for high school students.

reddit
Intern for Alexis Ohanian (Founder)

Internship during my senior year of high school. Helped Alexis with projects involving code, negotiation, and research.

Warby Parker
Python, Nagios, RabbitMQ, SQL

Internship during sophomore and junior summers of high school. I worked on server monitoring and front-end.

Projects:
ScreenShades
HTML/CSS, JS, Node, MongoDB

At the 2013 PennApps Fall hackathon, I helped create a Chrome extension that seamlessly (without user input) stops your friends from spoiling TV shows for you (using machine learning). ScreenShades made it into the top 20 hacks (out of 204) and won awards and prizes from Comcast, Google, and MongoDB.

ClassMatch
HTML/CSS, JS, Python, GAE, Bootstrap, Flask, MongoDB

To make the process of finding one's classmates for the upcoming year easier and more efficient than each student posting on Facebook, Paras Modi and I created ClassMatch. Within an hour we surpassed the free GAE quota, and our first day brought 858 visits! We remade it the next year with a new stack.

Learn to Drive
HTML/CSS, JS, GM SDK, GAE, Bootstrap

My team's app won 2nd place at the 2013 TechCrunch NYC Disrupt hackathon and GM's award for the best app using their API. Learn to Drive is an app, to be placed in the dashboard of automobiles, that aids in the process of learning how to drive.

SoundSculptr
Python, LEAP Motion, OpenShift, JS, Flask, Bootstrap

My team and I placed in the top 20 apps at the 2013 Spring PennApps hackathon and won the award for the "Most Quotidian Hack". SoundSculptr is a new way to create music. Using only his hands (we used a developer copy of LEAP Motion for this project), a user is able to "sculpt" and then export music.

Education:

<table>
<tr><td colspan="2">Bergen County Academies High School
Academy for Technologies and Computer Science
Class of 2015</td></tr>
<tr><td>Data Structures</td><td>2014</td></tr>
<tr><td>C-Programming</td><td>2014</td></tr>

Skills:

— Programming Languages —

Most Proficient
Python
HTML/CSS
Javascript
Java
PHP

Have Used Before
Bash
C
Objective-C

— Technologies —

Most Proficient
Flask
Git
jQuery
Twitter Bootstrap
MongoDB
Heroku
React

Have Used Before	
Jinja2	Nagios
Vim	iOS SDK
LEAP Motion SDK	Google App Engine
Flux	MySQL
Django	PostgreSQL
GM Dashboard SDK	Gulp
RabbitMQ	Node.js
